QUARTERLY RETURN

OF THE

MARRIAGES, BIRTHS AND DEATHS

REGISTERED

DURING THE MARCH QUARTER, 1941.

WITH

*The Number of Cases of certain Infectious Diseases notified, Vaccinations,
&c., &c., &c.,*

By Authority of the Registrar-General.

To be purchased directly from the
GOVERNMENT PUBLICATIONS SALE OFFICE, 3/4 COLLEGE STREET, DUBLIN, C.5.
or through any Bookseller.

Price Sixpence Net.

NOTE.—The figures in this report must be regarded as provisional. Deaths have been assigned so far as possible to the area of residence, and those of non-residents of Eire have been excluded.

MARCH QUARTER, 1941.**MARRIAGES.**

The marriages registered during the quarter numbered 3,554, equivalent to an annual rate of 4·8 per 1,000 of the estimated population; this rate is 0·1 above that for the corresponding quarter of 1940.

Of the total marriages, 3,403 (or 4·9 per 1,000 of the estimated number of Catholics in the population) were celebrated in accordance with the rites and ceremonies of the Catholic Church. The remainder (151) is equivalent to 3·1 per 1,000 of the population other than Catholic.

BIRTHS.

The number of births registered during the quarter amounted to 13,678, of which 7,045 were of males and 6,633 of females.

The number represents a rate of 18·3 per 1,000 of the estimated population, being 0·8 below the rate for the first quarter of 1940.

The total includes 462 illegitimate births, equivalent to 3·4 per cent. of the total births recorded.

DEATHS.

The number of deaths registered during the quarter was 14,648; of this number 7,535 were of males, and 7,113 of females.

The equivalent annual rate was 19·6 per 1,000 of the estimated population, being 1·5 above the rate for the first quarter of the preceding year.

Principal Epidemic Diseases.—Deaths from these diseases—comprising typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoea and enteritis of children under 2 years of age—represented an annual rate of 0·3 per 1,000, which was 0·1 below that for the first quarter of 1940.

When compared with the corresponding quarter of last year deaths from these diseases show increases in the case of measles, whooping-cough and dysentery amounting to 14, 4 and 2 respectively. On the other hand deaths from typhoid fever have decreased by 3, scarlet fever by 6, diphtheria by 25, and diarrhoea and enteritis (of children under 2 years of age, by 39.

Influenza.—The number of deaths from influenza was 868, which is 437 more than that for the first quarter of 1940.

Tuberculous Disease.—Deaths from this disease numbered 1,028, including 822 from pulmonary tuberculosis and 206 from other forms of tuberculous disease. The figures for the first quarter of 1940 were 1,000, 807 and 193 respectively. The rate from all forms of this disease was 1·4 per 1,000, that for pulmonary tuberculosis being 1·1 and all other forms 0·3; the respective rates for the first quarter of the preceding year were also 1·4, 1·1 and 0·3.

Cancer.—Deaths from cancer numbered 962, being equivalent to a rate of 1·3 per 1,000 of the population; in the corresponding quarter of 1940 the number was 940, and the rate 1·3.

Puerperal Causes.—Deaths from these causes were represented by a rate of 2·9 per 1,000 births registered, comprising 0·8 for puerperal infection, and 2·1 for other puerperal causes, as compared with 3·1, 0·9 and 2·2 for the first quarter of last year.

Infant Mortality.—The rate (deaths of infants under one year of age per 1,000 births registered) was 83, and that for the March quarter of 1940 was 77.

Population.—It is estimated that at the middle of the year 1941 the population was 2,992,000 (1,532,000 males and 1,460,000 females). This estimate, based on the population according to the Census of 1936, the number of births and deaths registered, and the passenger movement (including emigration and immigration), is subject to revision in subsequent issues of this return and in the Annual Report of the Registrar-General.

* Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

† The rates for Éire and the City of Dublin are calculated on the estimated population at the middle of 1941 and those for the other areas on the population according to the Census of 1936.

‡ The rates per 1,000 births for the county boroughs of Dublin, Cork, Limerick and Waterford are calculated on the number of urban births for each of these areas given in Table IV., and those for the counties of Dublin, Cork, Limerick and Waterford on the number of births registered therein plus an estimate of the number of births for these counties occurring in institutions in the respective county boroughs.

(a) According to the Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1941.

(b) The number of births in this Table is partially corrected according to the residence of the mother. The number of births shown in Table VI is the total registered in the respective areas.

Table V.—Deaths registered for the City of Dublin and the County Borough of Cork by Registrars' Districts, with the mortality per 1,000 of the population from all causes and from the principal epidemic diseases during the March Quarter, 1941.

JUNE QUARTER, 1941.**MARRIAGES.**

The marriages registered during the quarter numbered 3,724, equivalent to an annual rate of 5·0 per 1,000 of the estimated population; this rate is 0·2 below that for the corresponding quarter of 1940.

Of the total marriages, 3,470 (or 5·0 per 1,000 of the estimated number of Catholics in the population) were celebrated in accordance with the rites and ceremonies of the Catholic Church. The remainder (254) is equivalent to 5·1 per 1,000 of the population other than Catholic.

BIRTHS.

The number of births registered during the quarter amounted to 14,946, of which 7,591 were of males and 7,355 of females.

The number represents a rate of 20·0 per 1,000 of the estimated population, being 0·4 below the rate for the second quarter of 1940.

The total includes 565 illegitimate births, equivalent to 3·8 per cent. of the total births recorded.

DEATHS.

The number of deaths registered during the quarter was 11,328; of this number 5,948 were of males, and 5,380 of females.

The equivalent annual rate was 15·1 per 1,000 of the estimated population, being 0·9 above the rate for the second quarter of the preceding year.

Principal Epidemic Diseases.—Deaths from these diseases—comprising typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoea and enteritis of children under 2 years of age—represented an annual rate of 0·4 per 1,000, which was 0·1 above that for the second quarter of 1940.

When compared with the corresponding quarter of last year deaths from these diseases show increases in the case of typhoid fever, typhus, measles, whooping-cough and diarrhoea and enteritis (of children under 2 years of age) amounting to 3, 4, 10, one and 10 respectively. On the other hand deaths from scarlet fever have decreased by 3, and diphtheria by 6.

Influenza.—The number of deaths from influenza was 318, which is 92 more than that for the second quarter of 1940.

Tuberculous Disease.—Deaths from this disease numbered 980, including 738 from pulmonary tuberculosis and 242 from other forms of tuberculous disease. The figures for the second quarter of 1940 were 1,107, 869 and 238 respectively. The rate from all forms of this disease was 1·3 per 1,000, that for pulmonary tuberculosis being 1·0 and all other forms 0·3; the respective rates for the second quarter of the preceding year were 1·5, 1·2 and 0·3.

Cancer.—Deaths from cancer numbered 874, being equivalent to a rate of 1·2 per 1,000 of the population; in the corresponding quarter of 1940 the number was 857, and the rate 1·2.

Puerperal Causes.—Deaths from these causes were represented by a rate of 2·0 per 1,000 births registered, comprising 0·4 for puerperal infection, and 1·6 for other puerperal causes, as compared with 3·6, 0·7 and 2·9 for the second quarter of last year.

Infant Mortality.—The rate (deaths of infants under one year of age per 1,000 births registered) was 71, and that for the June quarter of 1940 was 62.

Population.—It is estimated that at the middle of the year 1941 the population was 2,993,000 (1,533,000 males and 1,460,000 females). This estimate, based on the population according to the Census of 1936, the number of births and deaths registered, and the passenger movement (including emigration and immigration), is subject to revision in subsequent issues of this return and in the Annual Report of the Registrar-General.

Table I.—MARRIAGES, BIRTHS and DEATHS registered in the years 1936 to 1941, by Quarters.

* Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

† The rates for Eire and the City of Dublin are calculated on the estimated population at the middle of 1941 and those for the other areas on the population according to the Census of 1936.

‡ The rates per 1,000 births for the county boroughs of Dublin, Cork, Limerick and Waterford are calculated on the number of urban births for each of these areas given in Table IV., and those for the counties of Dublin, Cork, Limerick and Waterford on the number of births registered therein plus an estimate of the number of births for these counties occurring in institutions in the respective county boroughs.

Table IV.—BIRTHS and DEATHS registered for the Principal Towns during the June Quarter, 1941.

(a) According to the Census of 1936, but in the case of the City of Dublin and the Borough of Dun Laoghaire the populations given are those estimated to the middle of 1941.

(b) The number of births in this Table is partially corrected according to the residence of the mother. The number of births shown in Table VI is the total registered in the respective areas.

(c) Typhoid fever.

of the population from all causes and from the principal epidemic diseases during the June Quarter, 1941.

[illegible]

These rates are calculated on the estimated population shown in Table IV.

(a) Typhoid fever

Table VI.—MARRIAGES, BIRTHS and DEATHS Registered by Provinces and Counties, with Deaths from some of the Principal Causes; Inquest Cases; Deaths in Public Institutions; Uncertified Deaths; and the number of VACCINATIONS during the June Quarter, 1941.

SEPTEMBER QUARTER, 1941.**MARRIAGES.**

The marriages registered during the quarter numbered 4,223, equivalent to an annual rate of 5·6 per 1,000 of the estimated population; this rate is 0·6 below that for the corresponding quarter of 1940.

Of the total marriages, 3,900 (or 5·6 per 1,000 of the estimated number of Catholics in the population) were celebrated in accordance with the rites and ceremonies of the Catholic Church. The remainder (323) is equivalent to 6·5 per 1,000 of the population other than Catholic.

BIRTHS.

The number of births registered during the quarter amounted to 15,056, of which 7,782 were of males and 7,274 of females.

The number represents a rate of 20·1 per 1,000 of the estimated population, being 0·7 above the rate for the third quarter of 1940.

The total includes 497 illegitimate births, equivalent to 3·3 per cent. of the total births recorded.

DEATHS.

The number of deaths registered during the quarter was 8,683; of this number 4,432 were of males, and 4,251 of females.

The equivalent annual rate was 11·6 per 1,000 of the estimated population, being 0·1 above the rate for the third quarter of the preceding year.

Principal Epidemic Diseases.—Deaths from these diseases—comprising typhoid fever, typhus, small-pox, measles, scarlet fever, whooping-cough, diphtheria, dysentery and diarrhoea and enteritis of children under 2 years of age—represented an annual rate of 0·6 per 1,000, which was 0·2 above that for the third quarter of 1940.

When compared with the corresponding quarter of last year deaths from these diseases show increases in the case of typhoid fever, measles, whooping-cough and diarrhoea and enteritis (of children under 2 years of age) amounting to 9, 14, 14 and 140 respectively. On the other hand deaths from diphtheria have decreased by 2.

The deaths from diarrhoea and enteritis of children under 2 years of age numbered 317, including 223 for the City of Dublin.

Influenza.—The number of deaths from influenza was 69, which is 27 more than that for the third quarter of 1940.

Tuberculous Disease.—Deaths from this disease numbered 832, including 643 from pulmonary tuberculosis and 189 from other forms of tuberculous disease. The figures for the third quarter of 1940 were 800, 619 and 181 respectively. The rate from all forms of this disease was 1·1 per 1,000, that for pulmonary tuberculosis being 0·9 and all other forms 0·2; the respective rates for the third quarter of the preceding year were 1·0, 0·8 and 0·2.

Cancer.—Deaths from cancer numbered 879, being equivalent to a rate of 1·2 per 1,000 of the population; in the corresponding quarter of 1940 the number was 885 and the rate 1·2.

Puerperal Causes.—Deaths from these causes were represented by a rate of 2·7 per 1,000 births registered, comprising 0·8 for puerperal infection, and 1·9 for other puerperal causes, as compared with 2·9, 0·4 and 2·5 for the third quarter of last year.

Infant Mortality.—The rate (deaths of infants under one year of age per 1,000 births registered) was 64, and that for the September quarter of 1940 was 50.

Population.—It is estimated that at the middle of the year 1941 the population was 2,993,000 (1,533,000 males and 1,460,000 females). This estimate, based on the population according to the Census of 1936, the number of births and deaths registered, and the passenger movement (including emigration and immigration), is subject to revision in subsequent issues of this return and in the Annual Report of the Registrar-General.

Table I.—MARRIAGES, BIRTHS and DEATHS registered in the years 1936 to 1941, by Quarters.

* Typhoid fever, typhus, small-pox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoeal diseases.

† The rates for Eire and the City of Dublin are calculated on the estimated population at the middle of 1941 and those for the other areas on the population according to the Census of 1936.

‡ The rates per 1,000 births for the county boroughs of Dublin, Cork, Limerick and Waterford are calculated on the number of urban births for each of these areas given in Table IV., and those for the counties of Dublin, Cork, Limerick and Waterford on the number of births registered therein plus an estimate of the number of births for these counties occurring in institutions in the respective county boroughs.

(a) Including 9 deaths from puerperal sepsis and 3 from puerperal embolism.

Table IV.—BIRTHS and DEATHS registered for the Principal Towns during the September Quarter, 1941.

DECEMBER QUARTER, 1941.**MARRIAGES.**

The marriages registered during the quarter numbered 3,621, equivalent to an annual rate of 4·8 per 1,000 of the estimated population; this rate is 0·3 above that for the corresponding quarter of 1940.

Of the total marriages, 3,396 (or 4·9 per 1,000 of the estimated number of Catholics in the population) were celebrated in accordance with the rites and ceremonies of the Catholic Church. The remainder (225) is equivalent to 4·6 per 1,000 of the population other than Catholic.

BIRTHS.

The number of births registered during the quarter amounted to 13,030, of which 6,706 were of males and 6,324 of females.

The number represents a rate of 17·4 per 1,000 of the estimated population, being 0·2 below the rate for the fourth quarter of 1940.

The total includes 418 illegitimate births, equivalent to 3·2 per cent. of the total births recorded.

DEATHS.

The number of deaths registered during the quarter was 9,164; of this number 4,724 were of males, and 4,440 of females.

The equivalent annual rate was 12·3 per 1,000 of the estimated population, being 0·7 below the rate for the fourth quarter of the preceding year.

Principal Epidemic Diseases.—Deaths from these diseases—comprising typhoid fever, typhus, small pox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoea and enteritis (under 2 years of age)—represented an annual rate of 0·6 per 1,000, which was 0·2 above that for the fourth quarter of 1940.

When compared with the corresponding quarter of last year deaths from these diseases show increases in the case of scarlet fever, diphtheria and diarrhoea and enteritis (under 2 years of age) amounting to 6, 18 and 162 respectively. On the other hand deaths from typhoid fever have decreased by 2, measles by 23, and whooping cough by 31.

The deaths from diarrhoea and enteritis (under 2 years of age) numbered 308, including 186 for the City of Dublin.

Influenza.—The number of deaths from influenza was 66, which is 42 less than that for the fourth quarter of 1940.

Tuberculous Disease.—Deaths from this disease numbered 818, including 645 from pulmonary tuberculosis and 173 from other forms of tuberculous disease. The figures for the fourth quarter of 1940 were 709, 563 and 146 respectively. The rate from all forms of this disease was 1·1 per 1,000, that for pulmonary tuberculosis being 0·9 and all other forms 0·2; the respective rates for the fourth quarter of the preceding year were 1·0, 0·8 and 0·2.

Cancer.—Deaths from cancer numbered 898, being equivalent to a rate of 1·2 per 1,000 of the population; in the corresponding quarter of 1940 the number was 941 and the rate 1·3.

Puerperal Causes.—Deaths from these causes were represented by a rate of 2·7 per 1,000 births registered, comprising 0·4 for puerperal infection, and 2·3 for other puerperal causes, as compared with 3·3, 0·8 and 2·5 for the fourth quarter of last year.

Infant Mortality.—The rate (deaths of infants under one year of age per 1,000 births registered) was 73, and that for the December quarter of 1940 was 75.

Table I.—MARRIAGES, BIRTHS and DEATHS registered in the years 1936 to 1941, by Quarters.

* Typhoid fever typhus, small pox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoea and enteritis (under 2 years of age).

† The rates are calculated on the population according to the Register of Population, 1941.

‡ The rates for the county boroughs of Dublin, Cork, Limerick and Waterford are calculated on the number of urban births for each of these areas given in Table IV., and those for the counties of Dublin, Cork, Limerick and Waterford on the number of births registered therein plus an estimate of births for these counties occurring in institutions in the respective county boroughs.

Table IV.—BIRTHS and DEATHS registered for the Principal Towns during the December Quarter, 1941.

(a) According to the Census of 1936, but in the case of the Cities of Dublin, Cork, Limerick and Waterford the populations given are those according to the Register of Population, 1941.

The population for the Borough of Dun Laoghaire is estimated to the middle of 1941.

(b) The number of births in this Table is partially corrected according to the residence of the mother. The number of births in Table VI is the total registered in the respective areas.

(c) Typhoid fever.

of the population from all causes and from the principal epidemic diseases during the December Quarter, 1941.

YEAR, 1941.

MARRIAGES.

The marriages registered during the year numbered 15,122, equivalent to an annual rate of 5.1 per 1,000 of the estimated population ; this rate is equal to that for the year 1940.

Of the total marriages, 14,169 (or 5.1 per 1,000 of the estimated number of Catholics in the population) were celebrated in accordance with the rites and ceremonies of the Catholic Church. The remainder (953) is equivalent to 4.8 per 1,000 of the population other than Catholic.

BIRTHS.

The number of births registered during the year amounted to 56,710, of which 29,124 were of males and 27,586 of females.

This number represents a rate of 19.0 per 1,000 of the estimated population, being 0.1 below the rate for the year 1940.

The total includes 1,942 illegitimate births, equivalent to 3.4 per cent. of the total births recorded.

DEATHS.

The number of deaths registered during the year was 43,823 ; of this number 22,639 were of males, and 21,184 of females.

The equivalent annual rate was 14.7 per 1,000 of the estimated population, being 0.5 above the rate for the preceding year.

Principal Epidemic Diseases.—Deaths from these diseases—comprising typhoid fever, typhus, small pox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoea and enteritis (under 2 years of age)—represented an annual rate of 0.4 per 1,000, which was the same as the rate for the year 1940.

When compared with the corresponding figures for last year deaths from typhoid fever, typhus, measles, dysentery and diarrhoea and enteritis (under 2 years of age) show increases of 6, 4, 10, one and 266, respectively ; on the other hand deaths from scarlet fever have decreased by one, from whooping cough by 18, and from diphtheria by 15.

The deaths from diarrhoea and enteritis (under 2 years of age) numbered 864, including 506 for the City of Dublin.

Influenza.—The number of deaths from influenza was 1,321, which was 493 more than that for the year 1940.

Tuberculous Disease.—Deaths from all forms of tuberculous disease numbered 3,658, comprising 2,848 from pulmonary tuberculosis, and 810 from other forms of tuberculous disease. The corresponding figures for the year 1940 were 3,685, 2,907 and 778 respectively. The rate for deaths from all forms of this disease for 1941 was 1.2 per 1,000, the rate for pulmonary tuberculosis being 0.9, and all other forms 0.3 ; the respective rates for 1940 were 1.3, 1.0 and 0.3.

Cancer.—Deaths from cancer numbered 3,613, being equivalent to a rate of 1.2 per 1,000 of the population ; in the year 1940 the number was 3,773, and the rate 1.3.

Puerperal Causes.—Deaths from these causes are represented by a rate of 2.6 per 1,000 births registered, comprising 0.6 for puerperal infection, and 2.0 for other puerperal causes, as compared with 3.7, 1.0 and 2.7 for 1940.

Infant Mortality.—The rate (deaths of infants under one year of age per 1,000 births registered) was 73, that for the year 1940 being 66.

Table I.—MARRIAGES, BIRTHS and DEATHS Registered during the year 1941, by Provinces and Counties, with Deaths from some of the Principal Causes ; Inquest Cases ; Deaths in Public Institutions ; Uncertified Deaths ; and the number of VACCINATIONS.

* Typhoid fever, typhus, small pox, measles, scarlet fever, whooping cough, diphtheria, dysentery and diarrhoea and enteritis (under 2 years of age).

† The rates are calculated on the population according to the Register of Population, 1941.

‡ The rates for the county boroughs of Dublin, Cork, Limerick and Waterford are calculated on the number of urban births for each of these areas given in Table IV., and those for the counties of Dublin, Cork, Limerick and Waterford on the number of births registered therein plus an estimate of births for these counties occurring in institutions in the respective county boroughs.

Table 3.—BIRTHS and DEATHS registered for the Principal Towns during the year 1941.

(a) According to the Census of 1936, but in the case of the Cities of Dublin, Cork, Limerick and Waterford, the populations given are those according to the Register of Population, 1941. The population for the Borough of Dun Laoghaire is estimated to the middle of 1941.

(b) The births in this Table are partially corrected according to the residence of the mother. The births shown in Table I are the total numbers registered in the respective areas.

(c) Typhoid fever.

Table 4.—Deaths registered during the year 1941, for the City of Dublin and the County Borough of Cork by Registrar's Districts, with the mortality per 1,000 of the population from all causes and from the Principal Epidemic Diseases.

[illegible]

Table 5.—Summary of Cases of Infectious Diseases notified to the Department of Local Government and Public Health during the Year 1941.

This Summary has been prepared from the Department's Weekly Returns but adjustments have been made in respect of any corrections of these returns received after their issue.

The letters in the last column denote the following diseases :—A. Acute anterior poliomyelitis. B. Cerebro-spinal meningitis. C. Continued fever. D. Encephalitis lethargica. E. Erysipelas. F. Ill-defined fever. G. Membranous Croup. H. Meningitis. J. Ophthalmia neonatorum. K. Paratyphoid A. L. Paratyphoid B. M. Dysentery (Bacillary). N. Malaria. O. Undulant fever. P. Dysentery (Amoebic). Q. Pemphigus Neonatorum. R. Trachoma.
